

# Explorer+

by Kapcite

## Unleash the Full Power of Spatial Data

# A Single Point Access to Unlimited Geospatial Data

Explorer+, from Kapcite, is a map-centric viewer that allows users to view, access and use data through intuitive, user-friendly map interfaces using a web browser. By consolidating and mapping geospatial data from various sources, systems and formats into a centralized database facilitates data sharing, improves data access, and provides easy interaction with the data under a single access point.

## Gain Total Control over Your Spatially Enabled Information

Explorer+ provides a highly configurable system for instant mapping of geospatial data with two core geo platform components: the Map Viewer and the Administrator Module. Explorer+ comes with a basic data model that addresses the industry's need.

The Map Viewer solution delivers customized mapping capabilities with navigation tools, redlining, querying and information display based on the user's need. The Administrator Module establishes the levels of access and control for each user, as well as the system's setup and database defaults.

# Explore+ Dynamic Mapping Capabilities

Explorer+ offers a comprehensive list of functions to fully utilize spatial data, these including:

## Map Display

Features customizable map layers based on data with options to load new information.

## Navigation Tools

Provides the user with the necessary tools to easily zoom in or out, pan the map and change its scale or type.

## Bookmarks

Saves a particular geographic location for future use and reference.

## Measurement

Easily measures coordinates and various elements with different units and label options.

## Identification

Assists in locating specific areas or points on the map based on the set parameters.

## Table of Contents and Legend

Displays a dynamic table of contents with a legend that lists all the layers on the map and showcases the features in each layer. The user can toggle the visibility of the layers in the list.

## Search

Offers a wide range of searching options with the ability to broaden or limit searches to specific data fields and ranges.

## Redlining

Enables the user to make freehand georeferenced graphical edits that can be easily imported in the geodatabase.

## Print and Save

Offers various options for users to print their maps in different formats, save their maps and share them with others online.

## Brought to you by K&A

Explorer+ is a geospatial map viewer tracking by Karcite, a solution of Khatib & Alami (K&A). Karcite is a pioneer of efficient technology with three decades of experience, tapping into the potential and usefulness of Geographic Information Systems across governments, businesses, clients and users.
